## ABSTRACT

This thesis will attempt to define the tense/aspect system of Gothic, using the functionalist approach of Comrie's *Aspect* (1976) as a theoretical framework. Relatively little research has been conducted on the subject of Gothic aspect compared to that of Greek or Latin. The prior research in the field describes two main approaches. One, first put forward by Streitberg 1891, stated that Gothic had a tense/aspect system similar to those of Slavic languages in the use of preverbs to perfectivize verbs. The many exceptions to this theory led to a second approach, after Scherer 1954, suggesting that Gothic aspect is a semantic category and not a morphological one, and that preverbs have little or no relationship to aspect. My own interpretation is closer to Streitberg's in that preverbs do tend to encode perfective aspect, but I believe the system was incompletely developed at the time that Wulfila translated the Bible into Gothic; the exceptions noted by Scherer would then seem to indicate that the system was still in flux.

The central part of the thesis will be a statistical analysis of St Mark's Gospel in Greek and Gothic, with additional comparative data from Latin. From this limited corpus a list will be compiled of all verbs in St Mark's Gospel. Since the Greek tense/aspect system has already been defined, this list of verbs will be subdivided according to their Greek morphological categories and then analyzed to determine how the Greek aspectual distinctions (imperfective, perfective and retrospective) are translated into Gothic in terms of the presence or absence of preverbs.

## **CHAPTER ONE: INTRODUCTION AND OVERVIEW**

### **1.1 OBJECTIVES AND SCOPE**

The objective of this study is to examine the tense/aspect system of Gothic, a subject which has been somewhat neglected in comparison to examinations of tense and aspect in other Germanic languages, especially English and German. This is, to my mind, a shame, since Gothic is the oldest recorded Germanic language<sup>1</sup>, and is of major importance to comparative Indo-European linguistics. It therefore stands to reason that a deeper understanding of Gothic aspect would be very useful, if not essential, for understanding aspect in PIE. There are, of course, traditional grammars of Gothic such as Wright 1910, and comparative grammars for the entire Germanic family, Gothic included, such as Prokosch 1939 and Streitberg 1963. These, however, make no mention of aspect in the modern sense of the term. In the limited literature on the subject which does exist, there are two main approaches: the older interpretation espoused by Streitberg 1891 which defines Gothic tense/aspect as similar to Slavic tense/aspect in its use of preverbal elements to mark perfectivity, and a newer approach presented by Scherer 1954 and (independently, using a completely different theoretical framework) Hewson & Bubenik 1997, which reject aspect as a morphological category for Gothic (but retain it

---

<sup>1</sup>Runic inscriptions in an early North Germanic dialect date from the 2<sup>nd</sup> Century (Beeke 1995: 28). These are mostly very short inscriptions, providing insufficient data for a study of this nature.

as a semantic category).

In my own approach I tried to find a compromise between these diametrically opposing viewpoints. Using Streitberg 1891 as a starting point, I reached a conclusion that Gothic was in the process of developing a tense/aspect system similar to that of Slavic. Specifically, this means an opposition of an unmarked imperfective versus a perfective marked by a preverb. I diverge from Streitberg in suggesting that the development of a preverb-based aspectual contrast in Gothic never reached its completion. What I mean by this is that the extant Gothic literature comprises a 4<sup>th</sup> Century translation of the Bible, and that this available corpus constitutes a snapshot of Gothic as it existed at essentially one point in time. The discrepancies that led Scherer to reject aspect as a morphological category for Gothic could instead be signs of an aspectual system still under construction, as it were.

The use of preverbs to express aspectual distinctions is hardly limited to Slavic and (potentially) Gothic. It is also attested to varying degrees in Baltic (Hewson & Bubenik 1997: 142ff, Streitberg 1891: 76) and Celtic (McCone 1997: 111ff, Thurneysen 1961: 341ff). Outside Indo-European, a similar use of preverbs exists in Georgian (Hewitt 1995: 148ff). Such use of preverbs as perfectivizing elements could be regarded as an areal trait, characteristic of several linguistic groups in northeastern and central Europe. Such an areal trait would be unlikely to manifest itself in identical fashion throughout its area of influence. The situation can be compared to the palatalization and spirantization

of palatalvelar stops that divides the satem languages from the centum languages of Indo-European. Although Balto-Slavic, Indo-Iranian, Armenian and Albanian show similar developments of the PIE phonemes \**k*, \**g*, and \**gʰ*, these phonemes did not undergo exactly the same phonetic processes in all groups (Beekes 1995: 129). In the same fashion, the use of perfectivizing preverbs could easily have developed in one area and spread to another, with more restricted use in the latter.

It is therefore plausible that preverbs in Gothic, while in the process of acquiring perfective meaning, never became quite as specialized in this role as they did in Slavic. If this is the case, one would expect a high degree of congruity between the presence of a preverb and perfective meaning in the verb, but one should also expect that preverbs would not be exclusively perfective. Some imperfectives with preverbs would be expected if the system were incompletely established. Likewise, a minority of perfective verbs would probably appear without preverbs<sup>2</sup>.

My intention is to examine a particular corpus of Gothic, specifically St Mark's Gospel, in order to compare the Gothic verbal forms with their translations in Greek and Latin in order to gain some insight into this problem. It is my opinion that Gothic does encode aspect into its morphology, but not in a perfect one-to-one correspondence of form to meaning. It will be necessary to use comparative evidence from languages whose

tense/aspect systems are well-known to determine exactly to what extent the morphology of Gothic reflects aspectual contrasts. The tense/aspect systems of Greek and Latin have already been described by other scholars, so they will provide that comparative evidence. Greek will be more important to the study than Latin, since the former is the original language of the New Testament. Latin, like Gothic, employs two aspects, and will be used to provide supporting data, but it is not central to the study.

## 1.2 THEORY

The theoretical framework adopted for this study is the functionalist approach used by Comrie 1976. Although I will adhere closely to Comrie's theory, I will deviate from him on one point of terminology: in order to avoid confusing the perfect aspect with the perfective aspect or with the Perfect "tenses" in Greek and Latin, I will replace Comrie's term "perfect" with "retrospective", that is to say the same term used for this category by Binnick 1991 and Hewson & Bubenik 1997.

Three aspectual distinctions are central to the study of Indo-European languages such as those being examined here: imperfective, perfective and retrospective (=Comrie's perfect), although a progressive aspect will also be marginally relevant. Of these, the imperfective is the basic, unmarked aspect. It expresses durative, iterative or habitual action (Comrie 1976: 25). An example of the use of the imperfective is Ex. (1.1) (from Russian):

- (1.1) Он читал 'Правду'.

on           čita-l-Ø                              pravd-u  
he        read+PAST+Masc.Sg   Pravda+Acc.Sg  
'He was reading *Pravda*, he used to read *Pravda*.' (Comrie 1976: 26)

The emphasis in an imperfective verb is placed on the internal structure of the event, that is, seeing the event from within as it progresses (Comrie 1976: 24). Depending on the context, читал may refer to an event in progress or an event which used to happen repeatedly, possibly on a regular basis.

The perfective aspect is used to express an event as a completed whole, i.e. a "complete situation, with beginning, middle and end" (Comrie 1976: 18). As such, it does not give any overt indication of the "internal temporal situation" (Comrie 1976: 21) of the event, but remains an external view of the event. It is in fact possible for a durative event to be expressed by a perfective verb, provided that such an event is seen as a single punctual or momentary unit (Comrie 1976: 21). The perfective counterpart to Ex. (1.1) is Ex. (1.2):

- (1.2) Он прочитал 'Правду'.

on           pro-čita-l-Ø                              pravd-u  
he        PVB+read+PAST+Masc.Sg   Pravda+Acc.Sg  
'He read *Pravda*.'

The perfective прочитал implies that the subject *he* read the entire newspaper, that is, the reading of the newspaper is complete. Obviously, the act of reading is a event which requires a measurable amount of time to reach its completion, i.e. it is a durative event. Nevertheless, when the event is seen as complete and as a unit, the perfective is used.

The third aspect relevant to my research is Comrie's perfect, for which, as I

mentioned earlier, I use the term "retrospective". The retrospective primarily expresses the "continuing present relevance of a past situation" (Comrie 1976: 52). In other words, the event described has already happened, but its result is still in effect in some way. For example, in English (Comrie 1976: 56),

- (1.3) John has arrived.

the retrospective aspect is used to indicate that John arrived at some point in the past, and that he has not left again; the result of his arrival is still in effect. The retrospective is further used to represent a situation (as opposed to an event) which took effect in the past and continues to obtain through the present (Comrie 1976: 60):

- (1.4) I've been waiting for hours.

In Ex. (1.4), it is implied that I started waiting some time ago, and that I am still waiting now.

Finally, a progressive aspect is peripherally involved in the study<sup>3</sup>. The progressive is a subcategory of the imperfective; it explicitly describes an action in the process of being performed:

- (1.5) John is singing (Comrie 1976: 33).

In Ex. (1.5), the act of singing is taking place at the present moment. It started at some point in the past, is in progress at the time of speaking, and will continue into the immediate future.

---

<sup>3</sup>The progressive aspect was a category of Hebrew and Aramaic. Although it was not native to Greek, the construction was imitated by the speakers of a Syro-Palestinian variant of Hellenistic Greek. It was through this dialectal usage that the progressive was incorporated into the New Testament (Bubenik 1997: 49).

### 1.3 TENSE AND ASPECT IN NEW TESTAMENT GREEK

The aspectual distinctions described in §1.2 above can be further exemplified in the following sentences from the Greek component of the study's corpus:

### Imperfective

- |       |            |             |     |             |               |

**Ἐπω**      **Ἐποιῶντας** σε.  
**eksō**      **zēte+ousin=se**  
**outside**      **seek+3Pl=2Sg.Acc**  
... thy mother and thy brethren without **seek** for thee. (Mk. 3:32)

The Greek Present ζητούσιν in Ex. (1.6) serves as the unmarked non-past form. It shows that the act of seeking is ongoing at the time of speaking.

Perfective

- (1.7) Kal ἐνέθεω<sup>θη</sup> εὐθέως ...  
*kai e-ege-thē-O euthēōs*  
 and AUG-arise-PASS-3s.aor. immediately  
 And immediately he arose ... (lit. '... he was aroused ...') (Mk. 2:12)

In Ex. (1.7), the Greek Aorist  $\dot{\eta}\gamma\acute{e}r\theta\eta$  functions as a past perfective and indicates that the act of rising was a momentary event, and that it is now over (complete).

### Retrospective

- |       |      |                    |    |                 |                     |
|-------|------|--------------------|----|-----------------|---------------------|
| (1.8) | 'Ως  | <u>γέγραπται</u>   | ἐν | τῷ              | 'Ησαΐᾳ              |

*tōpos* *propētē*  
 ART.Masc.Sg.Dat prophet+Dat.Sg  
 As it is written in the prophets ... (lit. '... in Isaiah the prophet ...') (Mk. 1:2)

The use of the Greek Perfect (non-past retrospective) in Ex. (1.8) implies that the act of writing took place at some point in the past, but what was written is still around to be read; the result of the action is still in effect.

Progressive					
(1.9)	...	ὢν	γάρ	διδάσκων	αὐτοῖς ...

		... for he taught them ... (lit. '... for he was teaching them ...') (Mk. 1: 22)			

This periphrastic progressive in Ex. (1.9) is more specific than the imperfective and indicates explicitly that the teaching is an ongoing process running from the past through the present into the immediate future.

## 1.4 TENSE AND ASPECT IN GOTHIC

### 1.4.1 THE “SLAVIC-LIKE” APPROACH

Several scholars, including Grimm and Streitberg (Binnick 1991: 141), have remarked on the similarity between the well-known aspectual distinctions of Slavic and certain parallels in Germanic, particularly the use of preverbs. In Slavic a simple verbal root has either imperfective, or less commonly, perfective aspect as a lexical property (*aktionsart*). The addition of a preverb to an imperfective root changes the *aktionsart* of the root and yields the perfective counterpart to that verb: Russian написа- ‘write’ (perfective) formed from the stem писа- ‘write’ (imperfective) using the preverb {na} (Binnick 1991: 137). A lexically perfective stem may be turned into an imperfective stem through the use of an iterative suffix {va}: дава- ‘give’ (imperfective) from да- ‘give’

(perfective) (Binnick 1991: 136). The same mechanism can also be used to create derived imperfective-perfective pairs as shown by the Infinitives in Table 1.1 (Binnick 1991: 137):

Table 1.1 Aspect and Derivation in Russian

	Imperfective	Derived Perfective	Secondarily Derived Imperfective
'write'	писать	написать	—
'copy'	—	переписать	переписывать

It was noticed that Germanic languages, Gothic among them, also make extensive use of preverbs (the most common being *ga-*), which seem to have the same perfectivizing effect as in Slavic. For example, the Gothic minimal pair *slēpan* 'to sleep' (imperfective) versus *gaslēpan* 'to fall asleep' (perfective) seems to represent the same process of altering the *akitionsart* of the verb which prevails in Russian писать~написать 'to write' (Binnick 1991: 141). Since early Germanic languages possessed only two tenses (Hewson & Bubenik 1997: 209), i.e. past and non-past, the "Slavic-like" theory would suggest a symmetrical, four-member tense-aspect system for Gothic as in Ex. (1.10):

(1.10)		Imperfective	Perfective
Non-Past		<i>nima</i> 'I take'	<i>ganima</i> 'I will take'
Past		<i>nam</i> 'I was taking'	<i>ganam</i> 'I took'

The data of this study will show that this simple schematic, convenient though it may be,

is not really accurate, as the representation of aspectual distinctions was not yet fully developed.

#### 1.4.2 THE “ASPECT-LESS” APPROACH

Scherer, on the other hand, puts forth the suggestion in his 1954 article (223) that aspect in Gothic is actually not a morphological category at all, i.e. aspectual distinctions are independent from, and do not regularly correspond to any formal constructions in the morphology of the language. He rejects the notion that Gothic had an aspectual system similar to Slavic in which simple verbs were either perfective or imperfective, with prefixes and/or suffixes being employed to create aspectual pairs (Scherer 1954: 211). According to Scherer, such a system cannot be supported for Gothic.

Although there are preverbs in Gothic which function superficially like those of Slavic, they are not universally perfectivizing. The verbs *gaspillōn* ‘preach’ and *usspillōn* ‘relate’, both from *spillōn* ‘narrate’ are both imperfective, despite the presence of preverbs (Scherer 1954: 220). In addition, he notes that Gothic has no equivalent to the Slavic iterative in {va}. Therefore, although Gothic can form derived verbs equivalent to Russian переписать by attaching a preverb to a root, such as *usnimān* ‘take away’ from *nimān* ‘take’, it has no way of forming a formal equivalent to *переписывать*. If Gothic preverbs do perfectivize as they do in Slavic, then it follows that any verb with an attached preverb can only be perfective. This further implies that derived verbs like *usnimān* can have only perfective forms. The four-way distinction in Ex. (1.10) above does not function since

derived verbs are completely lacking secondary imperfective forms. This lack of symmetry is shown in Table 1.2:

Table 1.2 Aspect and Derivation in Gothic

	Imperfective	Derived Perfective	Secondarily Derived Imperfective
'take'	niman	ganiman	—
'take away'	—	usniman	?

Scherer (1954: 212) states that there are four basic types of verb in Gothic. Firstly, there are verbs with one meaning which only occur in one aspect, either perfective or imperfective: *auhjōn* 'make noise' (imperfective). The second group of verbs has more than one meaning, but still only one possible aspect: *fijan* 'abhor, hate' (imperfective). Thirdly, some verbs have a single meaning and variable aspect which depends on context: *frijōn* 'love'. Finally, there are verbs with more than one meaning. The individual meanings may require different aspects: *bairan* 'bear' (imperfective) or 'give birth to' (perfective). All of these examples are simple, unprefixed verbs (Scherer 1954: 212). According to Scherer's view, then, aspect in Gothic is a lexical or semantic property of the verb; i.e. it is not aspect but *aktionsart* and has no connection to the morphology of the verb, and is therefore not a morphological category expressed in Gothic.

## **1.5 OTHER RESEARCH**

### **1.5.1 HEWSON & BUBENIK**

Hewson & Bubenik take a cognitive approach to Indo-European tense and aspect. In their theory, time is divided into time in the memory (events we remember; the past), time in the imagination (events we can imagine; the future) and the moment of experience (at which point the future passes through the present into the past) (Hewson & Bubenik 1997: 3). Within this framework, it is possible to visualize events in two ways. One can view an event as it passes out of the imagination into the memory (from the future into the past), i.e. an event in Descending Time. Alternatively, in Ascending Time, one sees an event as already begun (partially in the memory) and reaching towards a conclusion at some point in the future (i.e. the conclusion is in the imagination).

As it bears on my work, Greek and Gothic are shown to operate on opposing views of time. Greek has three aspectual distinctions inherited from PIE (imperfective, perfective and retrospective), all representations in Descending Time, “a view which represents the materiality of the event as it is being recorded” (Hewson & Bubenik 1997: 219), appearing in all moods (Hewson & Bubenik 1997: 32). An additional prospective aspect, a representation in Ascending Time, is restricted in Greek to the optative and nominal moods (Hewson & Bubenik 1997: 35). In Latin, there are two aspects, retrospective and imperfective, both representations in Descending Time (Hewson & Bubenik 1997: 190). Nominal and subjunctive forms permit additional aspects, including prospective and potential (Hewson & Bubenik 1997: 207). Representations in Descending Time describe

events from a reference point inside the event itself. As a result, an aspectual system such as the Greek has an imperfective aspect as the default, or unmarked member.

Gothic, differs from Greek and Latin in that the basic representation is Ascending, not Descending, Time and the basic aspect is therefore performative rather than imperfective (Hewson & Bubenik 1997: 224). The Gothic system is structured to view events as complete units, from an external reference point. This is very close to Comrie's definition of the perfective aspect, and in fact, Ascending Time makes little distinction between imperfective and perfective (Hewson & Bubenik: 220). This is because Ascending Time views events from a point prior to the event itself, and this viewpoint presupposes that the event must have internal structure of some sort; that internal structure is however not nearly as important for representations in Ascending Time as for Descending Time. Gothic, then, has two tenses but neither possesses nor requires aspectual contrasts in the indicative, using only a default performative aspect; there are aspectual distinctions similar to those of Greek in non-indicative forms (Hewson & Bubenik 1997: 222). The Slavic-like approach is consequently "overstated and completely unjustified" (Hewson & Bubenik 1997: 226).

### **1.5.2 LLOYD**

Lloyd's theory approaches aspect from a viewpoint similar to modern physics. It introduces a quantity called "actional velocity" to describe how quickly actions are completed. Actions may comprise one or more pulses, similar to quanta of energy. A pulse can constitute an entire action, or a part of an action so small it cannot be recognized as a

separate action (Lloyd 1979: 36).

Verbs are classified into three basic types (with several subtypes) on the basis of actional velocity. Punctual verbs consist of a single pulse of very high actional velocity, meaning the action represented by the verb begins and ends with no discernible interval of time. Such verbs can never occur in a true present, though they may appear in habitual or iterative statements. In addition they invariably indicate a complete action (Lloyd 1979: 43). Processive verbs are those whose actional velocity is low enough that the action takes a measurable amount of time to be completed. Processives may consist of one or more pulses of medium velocity (Lloyd 1979: 44ff). Finally, statal verbs have actional velocities so low that no action is perceptible; the subject of the verb does not seem to change at all (Lloyd 1979: 53ff). These three basic types may be regarded as *aktionsarten*, as their respective actional velocities define their lexical aspect.

For aspectual contrasts, Lloyd identifies the constative (such as the Greek Aorist), presentative (Greek Present), cursive (English progressives) and complexive aspects (Lloyd 1979: 71ff). Applying his theory to Gothic, he concludes that Gothic has a neutral aspect (unprefixed verbs) and a complexive aspect (verbs with *ga-* or other preverb), whose use is restricted to complete actions, in a similar (but not identical) fashion to Comrie's perfective aspect (Lloyd 1979: 144ff). The theory therefore agrees with the Slavic-like approach insofar as preverbs do mark aspect, but differs in that the Gothic complexive is more restricted than the Slavic perfective.

#### **1.4.3 WEST**

West (1981) sets forth the idea that aspectual distinctions in Gothic are in a privative, rather than polar, opposition. What this means is that Gothic aspect is not a black-and-white division into perfective and imperfective. Instead, there is a division into forms that are marked for perfective aspect using preverbs, and forms that are entirely unmarked for aspect (West 1981: 336). What this means is that a verb which carries a preverb can not have imperfective meaning, but a prefixed form can have either imperfective or perfective meaning depending on the context of the sentence. As he describes it, the Gothic aspectual system is only “weakly developed” (West 1981: 332).

The notion of a weakly developed aspectual system agrees with my research, but West and I diverge on the details. West explains the system in synchronic terms based on a theory of markedness, whereas I take a diachronic view, and see the Gothic corpus as a snapshot of a system in the process of development.

## CHAPTER TWO: GRAMMATICAL SKETCHES

This chapter provides a general overview of the verbal morphological systems of PIE, Greek, Gothic and Latin. As such, it is not meant to be comprehensive, and I refer the reader to the works listed in the Bibliography for specific details on these languages. Sample paradigms are provided at the end of the chapter.

### 2.1 PROTO-INDO-EUROPEAN

Verbs in Proto-Indo-European (PIE) were conjugated on the basis of up to three stems<sup>4</sup>, possibly with two tenses per stem. These stems, traditionally referred to as the Present, Aorist and Perfect systems after their principal members, are aspectual forms, reflecting the imperfective, perfective and retrospective aspects. In theory, this allows for a six-member tense/aspect such as that in Table 2.1:

Table 2.1 Tense/Aspect in PIE

	Imperfective	Perfective	Retrospective
Non-Past	Present *leikʷ-ō 'I leave'	?	Perfect *le-loikʷ-h₂e 'I have left'
Past	Imperfect *e-leikʷ-om 'I was leaving'	Aorist e-likʷ-om 'I left'	?

In practice, the daughter languages do not agree on the formation or even existence of the

---

<sup>4</sup>Some verbal roots do not form all three stems; the root \*h₁es- 'be', for example, has only imperfective forms.

non-past perfective (i.e. Future "tense") or past retrospective (Pluperfect), so they cannot be reconstructed with certainty; only the imperfective aspect appears to have showed tense distinctions in PIE (based on data from Greek, Armenian and Sanskrit). An important feature of the Proto-Indo-European system is its use of ablaut to show aspect, with e-grade of the stem appearing in the imperfective, o-grade in the retrospective and zero-grade in the perfective. This feature is especially important for the evolution of the verbal systems in Germanic (Hewson & Bubenik 1997: 213).

Ablaut was not the only method of indicating tense and aspect. A variety of affixes were also employed, as in the examples in Table 2.2, after Beekes 1995 (228ff).

Table 2.2 Stem Formation in PIE

Root	Affix	Imperfective Stem	Perfective Stem
* <i>kues-</i> 'kiss'	Nasal Infix	* <i>ku-n-es-</i>	
* <i>luk-</i> 'shine'	Suffix - <i>ei-/y-</i>	* <i>luk-ei-</i>	
* <i>gʷem-</i> 'go'	Suffix - <i>sk-</i>	* <i>gʷm-sk-</i>	
* <i>uegʰ-</i> 'carry'	Suffix - <i>s-</i>		* <i>uegʰ-s-</i>

## 2.2 GREEK

The Greek verb did not change drastically in its conjugation between the Classical and Hellenistic periods. It is morphologically far more complex than that of either Latin or Gothic, with verbs being inflected on the basis of the categories in the following Ex. (2.1), based on Balme and Lawall 1991 (250-1):

(2.1) Person: first, second, third

Number:	singular, plural
Tense <sup>5</sup> :	Present, Imperfect, Future, Aorist, Perfect, Pluperfect
Mood:	Indicative, Imperative, Optative, Subjunctive
Voice:	Active, Middle, Passive (the Passive is different from the Middle only in the Future and Aorist)
Infinitives:	Present, Future, Aorist, Perfect
Participles:	Present, Future, Aorist, Perfect

Note that the dual and Future Perfect, both increasingly uncommon in Classical Greek, have completely vanished in New Testament Greek. In addition, the Optative is in the process of disappearing from the language (Blass & Debrunner 1961: 36).

Of the three languages being examined here, only Greek retains the original tense/aspect contrasts of PIE, albeit not completely unchanged. A verb in New Testament Greek is inflected using a six-member system, as in Table 2.3:

Table 2.3 Tense/Aspect in Greek

	Imperfective	Perfective	Retrospective
Non-Past	Present λύ-ω 'I release'	Future λύ-σ-ω 'I will release'	Perfect λέ-λυ-κ-α 'I have released'
Past	Imperfect ἔ-λυ-ον 'I was releasing'	Aorist ἔ-λυ-σ-α 'I released'	Pluperfect ἐ-λε-λύ-κ-η 'I had released'

Although PIE cannot be reliably shown to have had a non-past perfective ("Future") or a past retrospective ("Pluperfect"), Greek had already innovated to fill these gaps by the Classical period. The non-past tense was unmarked; the past tense was marked by the

---

<sup>5</sup>Tense in the sense in which traditional grammars use the term.

“augment”. Verbs whose stem began with a consonant, such as λύω in Table 2.3 above, added a syllabic augment (ē-) as a prefix, as in ἔλυον. Vowel-initial verb stems in the Classical language usually took a temporal augment, tending to result in a long vowel or diphthong, thus, εὐ- [ε:y] would be augmented to ηὐ- [e:y], and οἰ- [ɔi] to ϕὐ- [o:ɔ̃]. For example, the Presents εὑρίσκω ‘I find’ and οἰκτίφω ‘I pity’ would be augmented to form the Aorists ηὔπον ‘I found’ and ϕόκτιψα ‘I pitied’. Over time, the changing pronunciation of vowels in post-Classical Greek meant that it was not unusual for verbs with initial diphthongs to remain unaugmented in the past tense in the later forms of the language. For example, ϕὐ- [o:] was no longer a suitable augmented form of οἰ- [y] (later [i]). Short, stem-initial monophthongs, however, still tended to be augmented on a regular basis (Blass & Debrunner 1961: 37).

Aspect, as in PIE, was marked by the stem. The perfective and imperfective stems differed from each other by means of either affixes or ablaut. The most common perfective marker was a morpheme {s} added as a suffix to the imperfective. The retrospective stem was heavily marked with both reduplication and, for most verbs, a morpheme {k} added as a suffix. These are illustrated in Table 2.3 above.

For other verbs, it was the imperfective stem that was secondary, formed from the root by such affixes as the nasal affix, among others, as in Table 2.4:

Table 2.4 Stem Formation in Greek

	Imperfective Stem	Perfective Stem	Retrospective Stem
Nasal Affix	καμ-ν- 'be tired' δεικ-νυ- 'show'	καμ- δειξ- for δεικ-σ-	κε-κμη- δε-δειχ-
Suffix -ei- or -γ-	δοκε- <*dok-ei- 'seem, think' βαλλ- <*-bal-y- 'throw'	δοξ- for δοκ-σ- βαλ-	δε-δοκ- βε-βλη-κ-
Suffix -sk-	γι-γνω-σκ- 'learn' (ἀπο-)θνη-σκ- 'die'	γνω- (ἀπο-)θνη-	γνω-κ- τε-θνη-κ-

As Table 2.4 shows, many verbs in Greek which indicate aspect by means of affixation use more than one affix in the paradigm to make aspectual contrasts more obvious. For example, neither the imperfective nor the perfective stem of δείκνυμι is the root alone; both are derived by suffixes.

The PIE ablaut system survived in Greek, and verbs which preserved it typically retained the inherited ablaut patterns as well; thus, e-grade occurred in the imperfective, zero-grade in the perfective and o-grade combined with reduplication in the retrospective. The fact that the Future is derived from the Present (i.e. imperfective) stem rather than from the Aorist (perfective) stem suggests that it is a later addition to the system. Ablaut in Greek is illustrated in Table 2.5:

Table 2.5 Ablaut in Greek

	Imperfective	Perfective	Retrospective
Non-Past	Present λείπω 'I leave'	Future λείψω for λείπ-σ-ω 'I will leave'	Perfect λέ-λοιπ-α 'I have left'
Past	Imperfect ξ-λειπ-ον 'I was leaving'	Aorist ξ-λιπ-ον 'I left'	Pluperfect έ-λε-λοιπ-η 'I had left'

### 2.3 GOTHIC

Traditional grammars of Gothic recognize two “tenses”<sup>6</sup> in the verb, the Present and the Preterite. The Present functions in actuality as more of a non-past tense, such as in Greek, rather than a true present, such as the Latin Present. The Preterite is basically a past tense.

Gothic verbs are subdivided into two main categories, depending on how they are inflected to form the Preterite. The so-called “strong” verbs preserve the Indo-European ablaut system (vowel changes in the root) with seven types of ablaut variation, reflected in the four traditional principle parts of each verb (Wright 1910, 141ff.). The principle parts, as shown in Ex. (2.1) are the Infinitive, 1<sup>st</sup> or 3<sup>rd</sup> Sg. of the Preterite<sup>7</sup>, 1<sup>st</sup> Pl. of the Preterite, and the Past (i.e. perfective) Participle:

---

<sup>6</sup>Tense in the sense in which traditional grammars use the term. A more modern interpretation would be a contrast of past versus non-past.

<sup>7</sup>Gothic makes no morphological distinction between the 1<sup>st</sup> and 3<sup>rd</sup> persons in the Preterite Singular.

(2.1)	Inf. & Pres.	Pret.Sg.	Pret.Pl.	PastP.
Class I	<i>beidan</i> 'await'	<i>baip</i>	<i>bidum</i>	<i>bidans</i>
Class II	<i>driusan</i> 'fall'	<i>draus</i>	<i>drusum</i>	<i>drusans</i>
Class III	<i>bindan</i> 'bind'	<i>band</i>	<i>bundum</i>	<i>bundans</i>
Class IV	<i>niman</i> 'take'	<i>nam</i>	<i>nēnum</i>	<i>numans</i>
Class V	<i>giban</i> 'give'	<i>gaf</i>	<i>gēbum</i>	<i>gibans</i>
Class VI	<i>faran</i> 'go'	<i>fōr</i>	<i>fōrum</i>	<i>farans</i>
Class VII	<i>haldan</i> 'hold'	<i>haihald</i>	<i>haihaldum</i>	<i>haldans</i>

Historically, these variations reflect the tense/aspect system of PIE, in that the Preterite is the result of a partial fusion of the Indo-European perfective and retrospective forms, which originally had different ablaut grades. The PIE perfective tends to provide the stems of the Preterite Dual and Plural and the Past Participle, while the Preterite Singular continues the retrospective (Hewson & Bubenik 1997: 217), although the specific details depend on the individual conjugational classes. The general trend, though, is a preservation of e-grade in the Present, mixed o- and zero-grade in the Preterite and zero-grade in the Past Participle. The phonological changes and the effects of analogy which have obscured the inherited ablaut systems are beyond the scope of this paper; I refer the reader to Wright 1910 and Prokosch 1938. Suffice it to say at this point that, due to the phonological reduction of verbal endings, the primary method of indicating tense and aspect in strong verbs was ablaut.

"Weak" verbs are typically secondarily-derived verbs which have no ablaut variation in the root, and which form their preterites by means of a dental suffix, instead. The resulting conjugation shows far fewer irregularities than that of the strong verbs,

since there are two stems (Preterite with dental suffix and Present without) to deal with.

This is illustrated in Ex. (2.2) (Wright 1910: 149ff.):

(2.2)	Inf. & Pres.	Pret.	Past Participle
Class 1	<i>nasjan</i> 'save'	<i>nasida</i>	<i>nasip̥s</i>
Class 2	<i>salbōn</i> 'anoint'	<i>salbōda</i>	<i>salbōp̥s</i>
Class 3	<i>haban</i> 'have'	<i>habaida</i>	<i>habaip̥s</i>
Class 4	<i>fullnan</i> 'become full'	<i>fullnōda</i>	<i>fullnōp̥s</i>

The dental suffix is of obscure origin. It apparently continues a Proto-Germanic suffix \*-dāē (possibly from PIE \*-d<sup>h</sup>ē), but where this ultimately comes from is disputed (Prokosch 1938: 194ff.).

The Gothic verb is conjugated on the basis categories Shown in Ex. (2.3):

(2.3)	Person:	first, second, third
	Number:	singular, dual (3 <sup>rd</sup> dual is lacking), plural
	Tense:	Present, Preterite
	Mood:	Indicative, Subjunctive, Imperative
	Voice:	Active, Passive (both synthetic and analytic forms exist in Present, only analytic in Preterite)
	Non-Finite:	Infinitive, Present Participle, Past Participle

## 2.4 LATIN

Latin deviates even more from the inherited PIE model than Gothic. Latin verbs have two stems in the indicative, one for the Present system (traditionally called *infectum*) and representing imperfective aspect, and another for the Perfect system (traditionally called *perfectum*), which combines the functions of the PIE perfective and retrospective (the combination is here called retrospective after Hewson & Bubenik 1997: 191). In addition,

Latin has innovated in replacing the two-tense system of PIE with a three-way contrast consisting of Past, Present and Future. This is shown in Table 2.6:

Table 2.6 Tense/Aspect in Latin

	Imperfective	Retrospective
Past	Imperfect <i>amābam</i> 'I loved'	Pluperfect <i>amāveram</i> 'I had loved'
Present	Present <i>amō</i> 'I love'	Perfect <i>amāvī</i> 'I have loved'
Future	Future <i>amābō</i> 'I will love'	Future Perfect <i>amāverō</i> 'I will have loved'

Non-present forms incorporate a cliticized form of the verb 'be'; in the Present system, this is *-b-* (from the root \**bhū-*), and in the Perfect system, *-er-* (from \**es-*) (Hewson & Bubenik 1997: 193). The Latin retrospective forms are the result of the merger of the PIE perfective and retrospective, similar to the Gothic Preterite. It is only natural, then, that the Latin Perfect system employs many of the same stem-forming methods used in PIE to form the Aorist and Perfect systems, including the s-Aorist and the reduplicated perfect. In addition to preserving older devices, Latin has also created a retrospective formation of its own, the u-Perfect. This can be seen in Table 2.7, drawn on data from Kühner 1912 (716ff):

Table 2.7 Stem Formation in Latin

	Imperfective Stem	Retrospective Stem
s-Aorist	<i>dīk-</i> 'say' <i>carp-</i> 'pick'	<i>dīk-</i> for <i>dīk-s-</i> <i>carp-s-</i>
Ablaut	<i>cap-i</i> 'seize'	<i>cēp-</i>

Reduplicated Perfect	<i>cad-</i> 'fall' <i>tend-</i> 'stretch'	<i>ce-cid-</i> <i>te-tend-</i>
Nasal Infix Present	<i>ta-n-g-</i> 'touch' ( <i>re-</i> ) <i>li-n-qu-</i> 'leave'	<i>te-tig-</i> ( <i>re-</i> ) <i>liqu-</i>
Presents formed by Suffixes	<i>crē-sc-</i> 'grow' <i>mon-e-</i> <* <i>mon-ei-</i> 'warn'	<i>crē-u-</i> <i>mon-u-</i>
u-Perfect	<i>amā-ā-</i> 'love' <i>mol-</i> 'grind'	<i>amā-u-</i> <i>mol-u-</i>

The following (Ex. (2.4)) are the categories marked for in the Latin verbal system:

- (2.4) Person: first, second, third  
 Number: singular, plural  
 Tense<sup>8</sup>: Present, Imperfect, Future, Perfect, Pluperfect, Future Perfect

## **CHAPTER 3: DESCRIPTION OF METHODOLOGY**

### **3.1 SOURCE OF DATA**

Since the only extant Gothic material is Wulfila's translation of the Bible, the data for this study must be drawn from it. Specifically, the data will be taken from St Mark's Gospel. This particular book was chosen because the Gothic version of it is almost completely intact (though even in this book, there are gaps in the surviving manuscripts<sup>10</sup>). The same cannot be said for other books of the Gothic Bible, manuscripts of which have deteriorated badly over time; in some cases, entire chapters are missing (the first four chapters and most of the fifth of St John's Gospel, for instance (Streitberg 1971, 30)). Given that this thesis examines the Gothic tense/aspect system in light of comparative Greek and Latin data, it is essential that there be enough evidence, and sufficient variety within that evidence, to support any tense/aspect system I define, and that the same data be available in each language. The corpus will be taken from the Nestle & Aland edition of the New Testament for the Greek component, from the Wordsworth & White edition of the Latin text and from Streitberg's edition of the Gothic Bible for that language. Given the plethora of English translations of the Bible available to readers, I considered it important to restrict myself to a single, well-known version. Consequently, all English translations will be taken from the King James Version (KJV) of the New Testament. Although the KJV frequently

---

<sup>10</sup>The five gaps in the text are located in the passages 6:30-53, 12:38-13:17, 13:30-14:4, 14:16-41, 16:11-20.

deviates syntactically and semantically from the languages under consideration (and will therefore be used only for translations and not as part of the data being analyzed), it is a sufficiently well-known version that readers of my thesis who are less familiar with Greek and Latin will be able to recognize the passages quoted.

### **3.2 ORGANIZATION AND COLLATION OF DATA**

A list will be compiled of all finite verbs (both indicative and modal) and participles in the Greek version of St. Mark, along with their translations in Gothic and Latin. To limit the corpus somewhat, infinitives and imperatives will not be included, except as noted below. It will be assumed that the Gothic translation from the Greek (particularly the aspectual features) is basically accurate, although some phrases which Wulfila translated more freely, may have to be disregarded. Since it is essential that the evidence used be the same for all languages in the study, a free translation like the following example in Ex. (3.1) may further complicate the data:

- (3.1)    Greek:        ... συλλυπού-μεν-ο-ς (grieve+PresP.+TV+Nom.Sg.Masc)  
                          ἐπὶ τῇ πωρόσει τῆς καρδίας αὐτῶν ...  
    Gothic:        ... *gaur-s* (sad+Nom.Sg.Masc) *in daubibðas hairtins izē* ...  
    English:        ... being grieved for the hardness of their hearts, ... (Mk. 3:5).

The Present Participle in the Greek version, συλλυπούμενος from συλλυπέομαι ‘be grieved’ (Rienecker 1970: 94), is translated into Gothic with the non-participial adjective *gaurz* ‘sad’ (Wright 1910: 323). Although participles do form part of the data being analyzed, this phrase must be omitted from consideration, since the Gothic adjective

obviously cannot express verbal aspect. As well, it will be necessary to account for the use of the narrative present, as in Ex. (3.2):

- (3.2)    Greek:            Kai ἐξῆλθεν ἐκεῖθεν, καὶ ἔρχεται (come+TV+3Sg.Pres.)  
                               εἰς τὴν πατρίδα αὐτοῦ ...  
    Gothic:                Jah usstōþ jainþrō jah *gam* (come+3Sg.Pret.) *in landa  
seinamma* ...  
    English:              And he went out from thence, and came into his own country  
                              (Mk. 6:1)

There is no reason to suppose that Gothic *gam* (Preterite of *qiman* ‘to come’) is the natural translation of ἔρχεται (Present of ἔρχομαι ‘to come’). The Greek Present is here used for stylistic purposes (Wallace 1996: 530), which the Gothic text does not necessarily imitate. These discrepancies will be evaluated on a case-by-case basis<sup>11</sup>.

After exceptions such as those in Ex. (3.1) and (3.2) have been taken into consideration, the corpus will consist of a total of 1991 verbs. The raw data for the entire corpus will be included as Appendix A. These verbs will then be subdivided, first according to their Greek morphological categories, i.e. all Presents together, all Aorists together, etc., then according to their corresponding categories in Gothic. This has the effect of grouping all verbs into lists according to their tense/aspect features in Greek and Gothic.

It is inevitable that certain verbs will recur time and again. For example, the Greek form εἶπεν ‘he said’ (Aorist) occurs no less than fifty times in the corpus. Given the fact that this very common verb form is consistently translated by Greek *qap* (Preterite) and

---

<sup>11</sup>A complete list of all rejected data will be compiled in Appendix B, along with the reasons for their rejection from the corpus.

frequently by Latin *dixit* (Perfect), using every instance of this form in the statistical calculations would badly skew the results. Consequently, it will be necessary to reduce the size of the lists mentioned above considerably, and this will be accomplished by counting multiple occurrences of a single verb as a single item for the study. The following will be used as guidelines for determining exactly what constitutes "a single item for the study".

(1<sup>st</sup>) In cases in which a given verb form in different entries is translated by different lexical items, each pair will be considered separately. Thus, the two sets in Ex. (3.3), in which the Gothic *qab* corresponds to two different verbs in Greek, would be treated as separate items:

(3.3)	Greek	Gothic	
	ἔλεγον (Imperfect)	<i>qab</i> (Preterite)	'he was saying'
	ἔφη (Imperfect)	<i>qab</i> (Preterite)	'he was saying'

(2<sup>nd</sup>) The categories of person, number, mood and voice will be disregarded for the purposes of the study, as these categories are not particularly relevant to an examination of tense and aspect. The three pairs in Ex. (3.4) would therefore be combined as a single item for the study.

(3.4)	Greek	Gothic	
	λέγω	<i>qipa</i>	'I say' 1sg. Pres. Ind.
	λέγεις	<i>qipeis</i>	'you say' 2sg. Pres. Ind.
	λέγῃ	<i>qipai</i>	'he would say' 3sg. Pres. Subj.

(3<sup>rd</sup>) Latin, as mentioned earlier, will be used to supply extra comparative data, but is not central to this study. Given that Latin shows a great deal more flexibility than Gothic in its translations, it will not always be possible within the format adopted to provide exact

statistics for the Latin component. Instead, the general trends that Latin follows will be noted and compared to the results of the Greek-Gothic correspondences.

(4<sup>th</sup>) As an additional guideline, infinitives and imperatives will not be examined, except where an infinitive or imperative in Greek or Gothic is translated into the other language by means of a form such as a participle or subjunctive, as participles and subjunctives are being considered.

(5<sup>th</sup>) Otherwise every verb will be counted separately.

### 3.3 PROCEDURE

The lists resulting from the compilation and reduction of the corpus will then be analyzed statistically in two phases to determine the distribution of the Gothic Present and Preterite forms. Particular attention will be paid to the use of preverbs in the Gothic data, to determine what their relationship to aspect actually is. The statistics being sought after include the following:

- A) % of Greek aspectual forms (imperfective, perfective and retrospective) which are translated by Gothic forms with preverbs,
- B) % of Greek aspectual forms (imperfective, perfective and retrospective) which are translated by Gothic forms without preverbs,
- C) % of Gothic forms with preverbs which translate Greek imperfectives,
- D) % of Gothic forms with preverbs which translate Greek perfectives,
- E) % of Gothic forms with preverbs which translate Greek retrospectives,
- F) % of Gothic forms without preverbs which translate Greek imperfectives,
- G) % of Gothic forms without preverbs which translate Greek perfectives, and
- H) % of Gothic forms without preverbs which translate Greek retrospectives.

The first phase will define the Gothic tense/aspect system in terms of its

relationship to the Greek one. Because Greek is the original language of the corpus, and also because its tense/aspect system is well-known, it will be taken as the metre-stick in the study. The second phase will reverse the process on the basis of the Gothic data, in order to provide confirmation. The Gothic equivalents of the Greek Imperfect (past imperfective) and Aorist (past perfective) will be most useful for this, since Gothic has only the Preterite to express past time. If preverbs are in fact used as perfectivizers, I would expect the Greek Aorist to correspond more often to a prefixed Preterite in Gothic, than to a Preterite with no preverb. In a similar vein, the Greek Imperfect should normally correspond to a Gothic unprefixed Preterite. I expect to find a strong correlation between certain forms, for example both the Greek and Gothic Presents are non-past imperfectives; they will most likely correspond to each other in a majority of cases.

## CHAPTER FOUR: FIRST PHASE OF ANALYSIS

### 4.1 GREEK IMPERFECTIVE

#### 4.1.1 GREEK PRESENT (NON-PAST IMPERFECTIVE)

There are 125 examples of the Greek Present in the corpus, shown in Table (4.1). All are translated by the Gothic Present (Indicative, Subjunctive or Participle). This includes 49 Presents (34.2%) which have preverbs and 76 Presents (60.8%) without preverbs. The Latin version includes a wide variety of possible translations, but generally restricts itself to the Present system (Present, Future and Imperfect, Indicative, Subjunctive, Participle and Infinitive), with only a single Perfect Participle (#426) to represent the Perfect system.

#### 4.1.2 GREEK HISTORICAL PRESENT

The historical Present, as noted earlier, is a stylistic device in Greek, not usually imitated by Gothic. All 54 Greek Presents in Table 4.2 are translated by the Gothic Preterite.

Preverbs occur in 32 cases (59.3%), leaving 22 (40.7%) without preverbs. Nine of the Latin translations involve a member of the Perfect system, but for the most part, Latin prefers the Present system and in fact shows a stronger tendency than Gothic to imitate Greek style; roughly a quarter of these examples are translated by a Latin Present (Indicative, Subjunctive or Participle).

#### 4.1.3 GREEK IMPERFECT (PAST IMPERFECTIVE)

There are 111 examples of the Greek Imperfect, as in Table 4.3. Two of these (1.8%) are translated into Gothic with the Present Participle, neither with a preverb. The remainder are translated by the Gothic Preterite. Preverbs appear in 37 cases (33.3%) and are lacking

in 72 (64.9%). In Latin, the Imperfect is used in almost all cases, with two Present Participles and seven Perfects/Pluperfects added to the mix.

#### 4.1.4 GREEK PRESENT PARTICIPLE (IMPERFECTIVE PARTICIPLE)

As shown in Table 4.4, the corpus provides 102 examples of the Greek Present Participle. Most are translated into Gothic with the Present Participle, although three Indicatives, one Subjunctive and two Infinitives appear, as well. In all, the Gothic Present system is used to translate 92 examples (90.%), of which 31 (30.4%) have preverbs and 61 (59.8%) do not. In addition, eight Past Participles and two Preterite Indicatives occur, accounting for 9.8% of the Greek participles. Among these ten, three have preverbs (2.9%). Once again, Latin has too much variety in its possible translations to give exact figures within the current format, but the majority of Greek Present Participles are translated by

Latin Present Participles. Most of the remainder also fall within the Present System, mainly Presents and Imperfects, but also including three Present Infinitives and two Future Participles. A very small number of Perfects appears, along with two Perfect Participles.

#### 4.1.5 SUMMARY OF GREEK IMPERFECTIVE

The results of the preceding sections are summarized in Table 4.5:

Table 4.5 Summary of Greek Imperfective

		Gothic							
		Present		Preterite or Past Participle		+PRV		-PRV	
		#	%	#	%	#	%	#	%
Greek Present	179	125	69.8	54	30.2	81	45.3	98	54.7
Greek Imperfect	111	2	1.8	109	98.2	37	33.3	74	66.7
Greek Present Participle	102	92	90.2	10	9.8	34	33.3	68	66.7
Total Greek imperfective	392	219	55.9	173	44.1	152	38.7	240	61.2

Since Gothic does not imitate the Greek Historical Present, the figures for the Greek Present in Table 4.5 are slightly in favour of the Gothic Preterite. Gothic favours forms with no preverb to translate the Gothic imperfective, with preverbs occurring in only a third of the cases examined. These results suggest that the lack of a preverb in Gothic may be associated with imperfective aspect. This would agree with Latin, which also prefers the Present (i.e. imperfective) system to translate Greek imperfectives.

## 4.2 GREEK PERFECTIVE

### 4.2.1 GREEK FUTURE (NON-PAST PERFECTIVE)

The Greek Future is represented 62 times in the corpus, as shown in Table 4-6. It is almost exclusively translated by the Gothic Present, with only one occurrence of a Preterite (#243). Of the Presents, 33 (53.2%) have preverbs while the other 28 (45.2%), as well as the lone Preterite (1.6%), do not have preverbs. The Latin version uses either the Future or, less commonly, the Present, to translate these verbs, and restricts itself to the imperfective aspect. The Latin retrospective appears only once (again, #243).

#### 4.2.2 GREEK AORIST (PAST PERFECTIVE)

A total of 324 Greek Aorists appear in the corpus, as listed in Table 4.7. The most common form used by Gothic to translate these verbs is the Preterite, especially with an

attached preverb. The Gothic prefixed Preterite accounts for 163 items (50.3%); the unprefixed Preterite for 68 (21.0%). Since the Greek Aorist may be used as an alternative to the Future, it can also be translated by the Gothic Present, i.e. non-past, form. Gothic Presents with preverbs appear in 48 cases (14.8%). The remaining 45 items (13.9%) have Gothic Presents without preverbs. Latin translates about three quarters of this group with the Perfect system, using mainly the Perfect.

#### 4.2.3 GREEK AORIST PARTICIPLE (PERFECTIVE PARTICIPLE)

The Greek Aorist Participle occurs 121 times<sup>21</sup>, illustrated by Table 4.8. In the majority of cases (74 times=61.2%), it is translated by the Gothic Present Participle with an

<sup>21</sup>

These figures include two Present Indicatives and ten Preterite Indicatives used to translate Greek Aorist Participles. These are treated as if they were participles.

affiliated preverb. A further 29 Present Participles (24.0%) occur without preverbs. Gothic Past Participles are very much in the minority, occurring only eight times (6.6%) with preverbs and ten times (8.3%) without. The general trend in Latin is to use the Present Participle, which occurs in over half of this group.

#### 4.2.4 SUMMARY OF GREEK PERFECTIVE

Table 4.9 summarizes the results of the preceding sections:

Table 4.9 Summary of Greek Perfective

		Gothic							
		Present		Preterite		+PRV		-PRV	
		#	%	#	%	#	%	#	%
Greek Future	62	61	98.4	1	1.6	33	53.2	29	46.8
Greek Aorist	324	93	28.7	231	71.3	211	65.1	113	34.9
Greek Aorist Participle	121	103	85.1	18	14.9	82	67.8	39	32.2
Total Greek perfective	507	257	50.7	250	49.3	326	64.3	181	35.7

Given that preverbs appear in nearly two-thirds of the Gothic component in

translating the Greek perfective, it is clear that Gothic preverbs must have some relationship to aspect. More specifically, they must have a strongly perfective nature to them. This would lend support to the notion, already put forward in §4.1.5, that the lack of a preverb would predispose a verb towards imperfectivity. The presence of a preverb, therefore, would mark a verb as perfective.

Latin, unfortunately, is of less help here than in other sections of the thesis. The translation of the Greek Aorist by the Latin Perfect supports the idea that Gothic Preterites with preverbs are perfective. However, the evolution of a three-way contrast in tense (past, present and future) as opposed to the past/non-past distinction in Greek and Gothic allows Latin greater flexibility than Gothic in translating the Greek Future. Inevitably, this flexibility permits Latin to translate verbs as imperfective which for Greek are perfective.

#### **4.3 GREEK RETROSPECTIVE**

##### **4.3.1 GREEK PERFECT (NON-PAST RETROSPECTIVE)**

In the Greek corpus there are twenty-one examples of the Perfect. Sixteen (76.1%) of these are translated by a Gothic form with a preverb, and only five (23.8%) without a preverb. All but three (14.2%) are translated by the Gothic Preterite; the three exceptions being expressed by the Gothic Present, all of them with preverbs. Because of syntactical differences, especially differences in the rules of sequence of tenses, between Greek and Latin, it is more difficult to provide such a clear-cut analysis as for Greek and Gothic. Most of the time, Latin uses the Perfect to translate the Greek Perfect; other possibilities include

three Imperfects, two Presents and one Pluperfect. Table 4.10 shows these results.

#### 4.3.2 GREEK PLUPERFECT (PAST RETROSPECTIVE)

The Greek text provides only six examples of the Pluperfect. As seen in Table 4.11, all but one (83.3%) are translated by the Gothic Preterite with preverb, the single exception (16.7%) being a Preterite with no preverb. In the Latin, four are translated by the Pluperfect, the exceptions being translated by one Imperfect and one Perfect, instead.

#### 4.3.3 PERFECT PARTICIPLE (RETROSPECTIVE PARTICIPLE)

There are seventeen examples of the Greek Perfect Participle. Eight (47.1%) are translated into Gothic by means of Past Participles with preverbs, and four (23.5%) by either

a Preterite or Past Participle without a preverb. The remaining five are translated by Present Participles, two with preverbs (11.8%) and three without (17.6%). This is shown in Table 4.12. The Latin version prefers the Perfect Participle (or other Perfect system form), but approximately a third of the examples here are translated by either a Present Participle or, in one case, an Imperfect.

#### 4.3.4 SUMMARY OF GREEK RETROSPECTIVE

A summary of these results may be tabulated as follows (Table 4.13):

Table 4.13 Summary of Greek Retrospective

		Gothic							
		Present		Preterite		+PRV		-PRV	
		#	%	#	%	#	%	#	%
Greek Perfect	21	3	14.2	18	85.7	16	76.1	5	23.8
Greek Pluperfect	5	0	0	5	100	5	100	0	0

Greek Perfect Participle	17	5	29.4	12	70.6	10	58.8	7	41.2
Total Greek retrospective	43	8	18.6	35	81.4	31	72.1	12	27.9

The Germanic Preterite, historically a fusion of the PIE perfective and retrospective aspects, is systemically the likeliest candidate to express the Greek retrospective aspect. Not surprisingly, the data bears this out, with Gothic showing an overwhelming preference for translating the Greek retrospective forms by means of the Preterite. Nevertheless, the presence of a few Presents in the data indicates that a retrospective meaning may be applied to that form as well. This makes sense, since the retrospective basically refers to a past event still relevant to the present moment. Gothic also shows a strong tendency for using preverbs in translating the Greek retrospective.

In addition, although not included in the first phase of the study, the Greek portion of the corpus also includes three Perfect Passive Infinitives (#492-4). These will be used in the second phase of the analysis.

#### 4.4 GREEK PERIPHRASTIC CONSTRUCTIONS

##### 4.4.1 PRESENT OF EIMI WITH PRESENT PARTICIPLE

The corpus yields one example of this type. In Gothic it appears as the Present of *wisan* followed by a Past Participle with preverb; in Latin as the Present of *sum* with the Perfect Passive Participle. This is unfortunately not very revealing because the Greek form is passive; the Present Participles of Gothic and Latin are inherently active and would not be

appropriate translations. The Past or Perfect Participle is substituted to translate passive voice rather than the imperfective aspect of the Greek form.

Table 4.14 Present of εἰμί with Present Participle

Tokens	Greek	Greek Verb and Number of Occurrences	Gothic	Latin	English Glosses
623,1868, 1899	ἐστίν μεθερμη- νευόμενος	εἰμί + μεθερ- μηνέω: 3	ist ga- skeirips	est interpre- tatus	being interpreted

#### 4.4.2 PRESENT OF EIMI WITH PERFECT PARTICIPLE

This combination appears only once in the corpus; it is translated into Gothic by the Preterite (Subjunctive in this particular case) of *wisan* combined with a Past Participle; no preverb appears. In Latin, the form used is the Imperfect (Subjunctive) of *sum* with the Perfect Passive Participle.

523	ἐστίν γεγονός	εἰμί + γίνομαι: 1	wesi waurþans	esset factus	was done

#### 4.4.3 IMPERFECT OF EIMI WITH PRESENT PARTICIPLE

This is the most productive periphrastic construction appearing in the corpus, with twelve examples. In every case, it is translated by the Gothic Preterite of *wisan* combined with a Present Participle; in only one case (8.3%) is a preverb present. The Latin version includes three Imperfects (25%); the others use the Imperfect of *sum* with a Present Participle.

Table 4.16 Imperfect of εἰμί with Present Participle

Tokens	Greek	Greek Verb and Number of Occurrences	Gothic	Latin	English Glosses
57,1720	ἢν διδάσκων, ἢμην διδάσκων	εἰμί + διδάσκω: 2	was laisjands	erat docens	taught

1930	ἢν προσδε- χόμενος	εἰμί + προσδέ- χομαι: 1	was beidands	erat expectans	waited

#### 4.4.4 IMPERFECT OF EIMI WITH PERFECT PARTICIPLE

Four examples are provided of this combination. Both Gothic and Latin retain the retrospective force of the Greek participle. All the Gothic translations use the Preterite of *wisan* followed by a Past Participle with a preverb. The Latin forms all have the Imperfect of *sum* followed by the Perfect Passive Participle.

1945	ἢν λελατο- μημένος	εἰμί + λατομέω: 1	was ga- drabans	erat excisus	was hewn out

#### 4.4.5 FUTURE OF EIMI WITH PRESENT PARTICIPLE

There is only one example of this combination in the corpus, (#1649), shown in Table 4.18. it is translated into Gothic using the Present of *wairban* with a Present Participle, and into Latin with the Future of *sum*, also with a Present Participle.

#### 4.4.6 AORIST OF EPXOMAI WITH PRESENT PARTICIPLE

In the corpus, there are two examples of the verb ἔρχομαι used in periphrastic constructions, as in Table 4.19. Both are translated into Gothic by means of the Preterite of *wisan* with a Present Participle. Of these, one has a preverb, the other does not. The Latin translations use the Imperfect of *sum* with a Present Participle. Despite the semantic difference between “he came preaching” and “he was preaching” the imperfective aspect of

the Greek Present Participle is retained in Gothic and Latin.

Table 4.19 Aorist of ἔρχομαι with Present Participle

110	ἠλθεν έκβάλλων	ἔρχομαι + έκβάλλω: 1	was us- wairpands	erat ciciens	cast out

A summary of these results, based on the translation of participial aspect, is found in Table 4.20. Even allowing for the confusion mentioned in 4.4.1 above, the Greek Present Participle is consistently translated by a Gothic Present Participle with no preverb. The Perfect Participle is likewise always translated by a Gothic Past Participle, usually with a preverb.

## CHAPTER FIVE: SECOND PHASE OF ANALYSIS

### 5.1 GOTHIc UNPREFIXED FORMS

#### 5.1.1 GOTHIc PRESENT

The corpus includes 156 examples of the Gothic Present which have no attached preverb. These are shown below in Table 5.1. Eighty of them correspond to the Greek Present (of all moods, including a couple of Infinitives and Imperatives not included in the first phase of the analysis) and one to the Greek Imperfect. Altogether, the Greek Present system accounts for 53.2% of this sample. The remainder (46.8%) are used to translate Greek perfectives: 47 Aorists (including two Infinitives) and 28 Futures. The general trend in Latin in this group is to use the imperfective forms; the retrospective is employed in only a tenth of these verbs.

### 5.1.2 GOTHIC PRETERITE WITHOUT PREVERB

This sample comprises 202 occurrences of the Gothic Preterite which are lacking preverbs, as shown in Table 5.2. The majority (120 times=58.1%) translate Greek imperfectives, specifically 46 Greek Presents and 74 Imperfects. A further 73 (37.9%) represent Greek perfectives, mostly Aorist, but also one Future. The remainder correspond to eight Greek Perfects (3%) and 2 Pluperfects (1%). The Latin translations, as in the preceding section, prefer the Present system, with the Perfect system being employed less than a quarter of the time.

### 5.1.3 GOTHIc PRESENT PARTICIPLE WITHOUT PREVERB

The Gothic Present Participle appears 86 times in the corpus, as in Table 5.3. Fifty-seven of them (66.3%) are used to translate the Greek Present Participle (also including four Indicatives and 1 Infinitive), with two more (2.3%) being used for the Greek Imperfect. The remainder (27 times=31.4%) are used as equivalents for the Greek Aorist Participle. Latin generally uses the Present Participle in these cases.

#### 5.1.4 GOTHIC PAST PARTICIPLE WITHOUT PREVERB

The Gothic Past Participle (with no preverb) appears only 15 times in the corpus, as illustrated in Table 5.4. In four cases (46.7%), it is used to translate the Greek Present Participle. The rest translate eight Greek Aorist Participles (33.3%) and three Perfect Participles (20%). The Latin equivalents are split almost evenly between imperfective and retrospective forms.

### 5.1.5 SUMMARY OF GOTHIC FORMS WITHOUT PREVERBS

The results obtained in the preceding sections are summarized in Table 5.5:

Table 5.5 Summary of Gothic Unprefixed Forms

		Greek

Gothic Preterite	203	118	58.1	77	37.9	8	3.9
Gothic Past Participle	15	7	46.7	5	33.3	3	20.0
Gothic Preterite System	218	125	57.3	82	37.6	11	5.0
Total Gothic without preverb	460	267	58.0	182	39.6	11	2.4

By and large, Gothic forms which do not have an attached preverb are used to translate Greek imperfectives, although the significant minority of perfectives (over a third of the total) is a weakness in the traditional theory that preverbs act as perfectivizers. This in turn supports my conclusion that the system had yet to crystallize when the Bible was being translated.

## 5.2 GOTHIC PREFIXED FORMS

### 5.2.1 GOTHIC PRESENT WITH PREVERB

The combination of preverb with Present morphology in the Gothic component of

the corpus occurs 120 times, as shown in Table 5.6. In approximately half the cases, it translates a Greek perfective form, either the Future (30 times=25%) or the Aorist Subjunctive (with future meaning) (35 times=29.2%). The remainder include 49 Greek Presents (40.8%) with a small minority of five Perfects (4.2%) and a single Imperfect (0.8%)<sup>29</sup>. These forms generally equate to Latin imperfectives; Latin perfectives appear in only about a tenth of the examples in this section.

### 5.2.2 GOTHIC PTERETE WITH PREVERB

The corpus yields a total of 272 examples of the Gothic Preterite with preverb, listed in Table 5.7. These function overwhelmingly as translations of the Greek Aorist, i.e. perfective. The Aorist-to-Preterite correspondence accounts for 174 examples (64.0%) of this sampling. The Gothic Preterite is also translated by 42 Greek Presents<sup>33</sup> (15.4%), 32 Imperfects (11.8%) and 23 retrospective forms (including both Perfect and Pluperfect) (8.5%).<sup>34</sup> The Latin translations are divided nearly in half, with a slight preference for the Perfect system.

### 5.2.3 GOTHIc PRESENT PARTICIPLE WITH PREVERB

The Gothic Present Participle appears 110 times with a preverb, as illustrated in Table 5.8. Only 32 times (29%) does it translate a Greek imperfective (usually the Present Participle, but also one Present Indicative). This combination is used three times (2.7%) to translate the Greek Perfect Participle. The other 75 occurrences (68.1%) translate the Greek Aorist, i.e. perfective, Participle<sup>35</sup>. This combination clearly shows a strong tendency towards perfectivity. This is, however, one instance where Latin does not agree with Gothic, as the former language generally prefers the Present, i.e. imperfective, Participle for this sampling.

<sup>35</sup>Also including four Aorist Indicatives

#### 5.2.4 GOTHIc PAST PARTICIPLE WITH PREVERB

There are twelve examples of the Gothic Past Participle with an attached preverb. Most (9 times=75%) serve to translate the Greek Perfect Participle. The rest are almost evenly divided between one Present Participle (8.3%) and two Aorist Participles (16.7%). This indicates a strong leaning toward the retrospective aspect in the Gothic Past Participle. The Latin possibilities, disregarding one adjective and one noun, also strongly favour the retrospective aspect; most of these examples have Latin Perfect Participles, plus one Perfect Infinitive and one Present Participle. This is illustrated in Table 5.9.

### 5.2.5 SUMMARY OF GOTHIC FORMS WITH PREVERBS

The results obtained in the preceding sections are summarized in Table 5.10:

Table 5.10 Summary of Gothic Prefixed Forms

		Greek					
		Imperfective		Perfective		Retrospective	
		#	%	#	%	#	%
Gothic Present	120	50	41.7	65	54.2	5	4.2
Gothic Present Participle	110	32	29.1	75	68.1	3	2.7
Gothic Present System	230	82	35.7	140	60.9	8	3.5
Gothic Preterite	271	74	27.2	174	64.0	23	8.5

Total Gothic with preverb	513	158	30.8	316	61.6	39	7.6

A strong majority of prefixed verbs in Gothic serve to translate the Greek perfective forms (Aorist and Future). This lends support to the traditional theory that preverbs act as perfectivizing elements.

## CHAPTER SIX: SUMMARY AND CONCLUSION

This study set out to define the tense/aspect system of Gothic, with special attention being paid to the distribution of preverbs. It was stated earlier that the traditional theory (Streitberg's) of Gothic aspect was that Gothic aspectual distinctions were encoded in basically the same way as in Slavic languages, i.e. using preverbs to alter the *aktionsart* of the simple verb. According to this theory, preverbs turn simple imperfective verbs into perfectives. The various exceptions to this theory led Scherer to conclude that Gothic preverbs have no relationship to aspect at all, and that Gothic does not mark aspect as a morphological category.

My own investigation revealed a state of affairs between these two extremes. I discovered that a system similar to Slavic was in the process of developing in Gothic, but that such a process never reached the same state of development that it did in Slavic. The absence of an iterative formation in Gothic and other exceptions that Scherer saw as counter-evidence to the traditional theory can be explained as an indication that the use of preverbs did not crystallize in Gothic to the extent it did in Slavic, or at any rate, it had not done so by the time the Bible was translated into Gothic.

To ascertain the validity of this approach, a statistical analysis was conducted on a limited corpus of verbs taken from the Greek and Gothic versions of St Mark's Gospel. In Chapter Three, it was stated that the following statistics were at the core of this thesis:

- A) % of Greek aspectual forms (imperfective, perfective and retrospective) which are translated by Gothic forms with preverbs,
- B) % of Greek aspectual forms (imperfective, perfective and retrospective) which are translated by Gothic forms without preverbs,
- C) % of Gothic forms with preverbs which translate Greek imperfectives,
- D) % of Gothic forms with preverbs which translate Greek perfectives,
- E) % of Gothic forms with preverbs which translate Greek retrospectives,
- F) % of Gothic forms without preverbs which translate Greek imperfectives,
- G) % of Gothic forms without preverbs which translate Greek perfectives, and
- H) % of Gothic forms without preverbs which translate Greek retrospectives.

Drawing on the information developed in Chapters Four and Five, it is now possible to supply these statistics. The Gothic equivalents for Greek aspectual contrasts (A and B above), as determined in Chapter Four, are shown in Table 6.1:

Table 6.1 Gothic Equivalents for Greek Aspect

	Gothic +PVB	Gothic -PVB
Greek Imperfective	169 (35.8%)	303 (64.2%)
Greek Perfective	326 (64.3%)	181 (35.7%)
Greek Retrospective	32 (74.4%)	11 (25.6%)

From these figures, it is easy to see that Greek imperfectives are translated by Gothic unprefixed forms roughly two out of three times. In a similar vein, a Greek perfective equates to a Gothic prefixed form about two thirds of the time. This consistency suggests a strong connection between aspectual contrasts and the presence or absence of a preverb.

Additionally, the Gothic Preterite is the result of the fusion of the PIE perfective and retrospective aspects. Since Gothic did not preserve the retrospective as a separate category,

a logical replacement for it would be the perfective. It would follow that the Greek retrospective would more likely be translated by a Gothic form with a preverb than one without. This expectation is borne out by the data: about three quarters of the time, the Greek retrospective is in fact translated by a Gothic form with a preverb.

Based on the data from Chapter Five, Gothic verbs which have no preverb (C, D and E above) show the following distribution (Table 6.2):

Table 6.2 Distribution of Unprefixed Gothic Verbs

	Greek Imperfective	Greek Perfective	Greek Retrospective
Gothic Present	145 (59.7%)	98 (40.3%)	0
Gothic Preterite	125 (57.3%)	82 (37.6%)	11 (5.0%)

Gothic verbs which do have preverbs (F, G and H above) are distributed as follows (Table 6.3):

Table 6.3 Distribution of Prefixed Gothic Verbs

	Greek Imperfective	Greek Perfective	Greek Retrospective
Gothic Present	82 (35.7%)	140 (60.9%)	8 (3.5%)
Gothic Preterite	76 (26.8%)	176 (61.9%)	31 (10.9%)

Based on Tables 6.2 and 6.3, it can be seen that the relationship of preverb and aspect continues to hold, with somewhat over half of the Gothic verbs with preverbs being translations of Greek perfectives. Likewise, a similar portion of the Gothic verbs without

preverbs represent Greek imperfectives.

Overall, the results of the analyses conducted in Chapters Four and Five present a picture of Gothic aspect in which there is a congruity between perfectivity and the presence of a preverb which ranges from sixty to seventy percent (averaging two-thirds). Even though a perfect one-to-one relationship of preverb to aspect can not be expected in world of rules and exceptions, this congruity is too high and too consistent to be purely coincidental. Contrary to the aspect-less approach, then, there must therefore be some direct relationship between preverbs and perfectivity. On the other hand, the presence of roughly one exception in three items examined indicates that the system, if such in fact existed, was underdeveloped.

This agrees with my suggestion that the aspectual system of Gothic had not crystallized by the time the Bible was translated. It is clear that a Slavic-like, preverb-based aspectual system was in the process of being established in Gothic, possibly as some kind of areal characteristic. The distribution of preverbs in the corpus used for this study demonstrates that preverbs were acquiring perfective meaning. However, in Wulfila's time, they had not yet become specialized in this role. This lack of specialization both allows for prefixed verbs to occasionally have imperfective meaning, and also allows for verbs to have perfective meaning, even without an attached preverb. The lack of a Gothic iterative formation parallel to Russian *переписывать* can be explained as follows: since Gothic preverbs were not yet exclusively perfective in meaning, an iterative was simply

unnecessary. The overlapping relationships of aspect and preverb use can be graphically illustrated in Table 6.4 below.

Table 6.4 Preverb Use and Aspect in Gothic

-PVB	Imperfective	
+PVB		Perfective

In conclusion, my analysis confirms that Gothic was establishing a preverb-based system of aspectual contrasts, but that the system was never completely developed. I attribute this to a diachronic process which was captured as a snapshot in a 4<sup>th</sup> Century Bible translation. Such a process would have begun some time before Wulfila made his translation, and would have continued afterwards. Since Gothic is extinct and unknown except for the Bible translation, it is impossible to say how the system may have continued to develop, had Gothic survived longer as a spoken language, or if other Gothic texts were still available to researchers.

The conclusions I have made are based on a sampling of verbs from a single book of the Bible. A possible avenue for future research is to continue to expand the corpus used in my research to include other books of the Bible, and possibly provide statistical comparisons of Gothic with other languages than Greek. I have, due to the constraints imposed by my chosen format, provided only the general trends that Latin took in translating Greek aspect, so it would be interesting to conduct a more detailed comparison of Gothic and Latin. Other languages which could be used to build on this research would include other languages

which use preverbs as aspectual markers, such as Old Church Slavonic, Old Irish and even Georgian.

## APPENDIX A — THE CORPUS

The following is a list of all verbs included in the study. Entries in the Greek column which are enclosed in square brackets ([...]) are alternate readings taken from the footnotes of the Nestle-Aland edition of the Greek New Testament. Chapter and verse are given according to the versification in Streitberg 1971. A number of particles have been removed for clarity, such as the Gothic interrogative enclitic *-u*. In addition, the contracted negatives *nist* (for Gothic *ni ist*) and Latin *nescio* (for *non scio*) have been expanded and treated as affirmatives. In addition, instances of *driggkjan* and *paggkjan* as alternate spellings of *drigkjan* and *pagkjan* have been normalized with one <g>, in order to conform to the conventional usage in traditional grammars.

## APPENDIX B — REJECTED MATERIAL

The following list does not include infinitives or imperatives, as they were never taken into consideration for the reasons stated in Chapter 3. All verbs which were rejected for any other reason are listed here, along with the reason they were excluded from the corpus.

Citation	Item	Reason for Rejection
1:4	Greek ἐγένετο Ἰωάννης ὁ βαπτίζων ἐν τῇ ἐρήμῳ, Gothic <i>was Iohannes daupjands in aupidai</i> , Latin <i>fuit Iohannes in deserto baptizans</i> , KJV <i>John did baptize in the wilderness</i>	Greek differs semantically from the other languages in that ἐγένετο corresponds to nothing in the translations, and βαπτίζων is a participle used as a noun, while the Gothic and Latin translations use the participle in a verbal periphrasis.
1:10	Latin <i>manentem</i>	Latin only
1:27	Gothic <i>sildaleikjandans</i>	Gothic gives a double translation for ἑθαμβήθησαν (App. A, #70): <i>af-slaupnode dun sildaleikjandans</i> . The latter word does not correspond directly to anything in Greek or Latin.
1:30	Greek πυρέσσουσα, Latin <i>febricitans</i> , KJV <i>(sick) of a fever</i>	Gothic has prepositional phrase <i>in brinnon</i>
