Expanding Public Access to the Results of Federally Funded Research

Posted by Michael Stobbs on February 22, 2013 at 12:04 PM EDT

The Obama Administration is committed to the proposition that citizens deserve easy access to the results of scientific research their tax dollars have paid for. That's why, in a policy memorandum released today, OSTP Director John Holdren has directed Federal agencies with more than $100M in R&D expenditures to develop plans to make the published results of federally funded research freely available to the public within one year of publication and requiring researchers to better account for and manage the digital data resulting from federally funded scientific research. OSTP has been looking into this issue for some time, collecting broad public input on multiple occasions and convening an interagency working group to develop a policy. The final policy reflects substantial inputs from scientists and scientific organizations, publishers, members of Congress, and other members of the public—over 65 thousand of whom recently signed a We the People petition asking for expanded public access to the results of taxpayer-funded research.
UK House of Lords enquiry on Open Access

11/01/2013

The UK's House of Lords (upper chamber of Parliament) Science & Technology Committee is conducting an enquiry into Open Access. Written submissions are welcome. Individuals and organisations are invited to give their views on the actions taken by Government and RCUK following publication of the Finch report. The HoL has issued guidance on how to make written submissions. In particular, there are four issues highlighted by the committee:

8 support for universities in the form of funds to cover article processing charges, and the response of universities and HEIs to these efforts
8 embargo periods for articles published under the Green model
8 engagement with publishers, universities, learned societies and other stakeholders in the development of research council Open Access policies and guidance
8 challenges and concerns raised by the scientific and publishing communities, and how these have been addressed.
Social Sciences and Humanities Research Council

Open Access

SSHRC, the Canadian Institutes of Health Research (CIHR) and the Natural Sciences and Engineering Research Council of Canada (NSERC) are developing a harmonized policy on access to research publications. From October 15 to December 13, 2013, SSHRC and NSERC will consult with a wide range of stakeholders in the research community on the draft document titled the Tri-Agency Open Access Policy. The harmonized policy is modeled after the CIHR Open Access Policy, which remains unchanged and continues to be mandatory. For more information, please contact openaccess@sshrc-crsh.gc.ca.

Partnership: the Canadian Journal of Library and Information Practice and Research

Partnership is a library and information practitioner’s journal published twice a year. Papers may be submitted at any time for publication consideration. Potential articles are reviewed by members of an editorial committee. Articles are published in several categories. Feature articles on theory & research and on innovations in practice are in-depth, peer-reviewed papers that typically fall in the range of 3,000 to 7,000 words. Other types of articles accepted include viewpoints, conference presentations, profiles, news & announcements, professional development and reviews.

The PeerJ Mission

PeerJ is an Open Access publisher that makes access to research free to all and affordable to publish for academic authors & their institutions.

Sign up for FREE to get content alerts

PeerJ provides academics with two Open Access publication venues: PeerJ (a peer-reviewed academic journal) and PeerJ PrePrints (a "pre-print server"). Both are focused on the Biological and Medical Sciences.

PeerJ starts at $99 - for lifetime publishing, and public PeerJ PrePrints are free to publish.

Learn how it works, or see our submission guidelines and academic board of editors.

Oxford Open prices adjusted for open access uptake

Martin Richardson | Managing Director, Oxford Journals

Oxford Journals’ experiments with open access under the Oxford Open initiative have now been running for over four years. We always strive to price our journals fairly, and so some of our Oxford Open journals have seen modifications to their 2008 prices based on the volume of open access content within those journals. However, as this is often one of several factors that impact on price setting, each title in the initiative has experienced different effects on its pricing. This article explores Oxford Journals is keen to ensure that the

• Oxford Journals Archive – the story so far – we
Gold for Gold

We recognise that researchers are often being asked to publish Open Access (OA), but do not have the funding to pay for it directly.

To support the funder-led evolution to Gold OA, and following a successful pilot scheme in the UK, our **Gold for Gold** initiative rewards all institutions that subscribe to RSC Gold with voucher codes to make papers available via OA, free of charge.

**Gold for Gold** ensures academics can further increase the visibility of their quality research, whilst raising their institution's reputation. Recent beneficiaries include: University of Cambridge, University College London, Queen's University Belfast, Birmingham University (all UK); University of California - Los Angeles (US); Helsinki University (Finland); Linkopings Universitet (Sweden); Universitat Basel (Switzerland); Van't Hoff Institute for Molecular Sciences (Netherlands).

We hope you take full advantage of any due voucher codes. For full details on how this project works, including information on how to claim and use your voucher codes, click on the Frequently Asked Questions link below.

@bjmcd2 @redgirl13 @scholarsportal Nothing but aces so far! My OJS admin headaches are all gone.
Jisc APC is a pilot project that aims to assist UK higher education institutions and publishers worldwide in managing Gold OA article processing charges. Managed by Jisc Collections, the pilot engages representatives from academic institutions, publishers, funders and intermediaries to explore key issues and respond to a changing global Open Access landscape. There are two complementary strands of activity:

**Strand 1: An exploration of key issues and challenges within a Gold OA environment**

The pilot aims to gather and share information on systems, processes, workflows and standards, and test the overall efficiencies that a third party, such as Jisc Collections, might offer to the various participants. Reflecting on and communicating lessons learned will avoid duplication of effort and result in greater efficiencies for all stakeholders.

**Strand 2: Delivery of an online administration platform for pilot institutions**

An online administration platform is being developed and delivered by Jisc Collections in conjunction with...
Take Home Question

What can (should) CAUL-CBUA be doing to support Gold Open Access within member libraries?

- Centralized OJS?
- Author’s Funds/APC Support?
- Investigate consortial memberships (PeerJ, etc.)?
- Education/member awareness?
- Other?
Thanks. Questions?
